PROFESSIONAL SUMMARY

Senior Full-Stack Developer with 2.5+ years building an offline-first pharmacy POS & ERP used daily in 10+ stores, using React, Flutter, Django and MongoDB. Lead a 4–6 member engineering team.

SKILLS

Frontend	JavaScript, TypeScript, React, Flutter, Dart, Tauri, HTML/CSS, Tailwind CSS
Backend	Django, Python, Node.js, Express.js, Socket.IO, REST APIs
Databases	MongoDB (change streams), PostgreSQL, SQLite, Meilisearch
Cloud & DevOps	GCP (Pub/Sub, Cloud Scheduler, Compute Engine), Git, PyInstaller, Inno Setup
Practices	System Design, Performance Tuning, Code Review, E2E Testing, AI-Assisted Dev

EXPERIENCE

CareEco Technologies Private Limited *Remote*
Senior Full-Stack Developer Jul 2024 – Present

- Own an offline-first pharmacy POS & ERP end to end, architecture to deployment; used daily in 5+ stores.
- Built a lighter React + Tauri client (2+ stores); a mouse-free billing flow cut billing time by 40%.
- Re-architected the Flutter billing grid (virtualization, cached cell refs, batched updates) to hold 60–120 FPS.
- Automated Windows releases: PyInstaller-frozen Django backend and app in one Inno Setup installer.
- Replaced timer-based auto-save with a dirty-flag debounce, cutting save requests by about 80%.
- Lead code reviews for a 4–6 member team; mentored 6+ interns; building end-to-end tests.

Full-Stack Developer Intern Jan 2024 – Jun 2024

- Built Flutter and Django features and fixed production issues during live store rollouts.

KEY PROJECTS (CAREECO)

Offline Medical Search Engine *Python, MongoDB, Double Metaphone*

- Tiered, index-backed search with medicine-aware tokenizing and phonetic matching for misspellings.
- Returns results in under 15 ms over 450,000+ products fully offline, ranking in-stock items first.

Two-Way Data Sync Engine (Local-Cloud and Peer-to-Peer) *Python, MongoDB, mDNS*

- Incremental two-way local and cloud sync via per-collection timestamp watermarks; catches up on reconnect.
- Preserved BSON types (dates, ObjectIds) across HTTP transport, avoiding date drift and broken refs.
- Cut new-store onboarding from 2 hours to 7 minutes with pre-built, unordered bulk catalog upserts.
- LAN peer-to-peer sync: counters auto-discover via Zeroconf and stream changes, with echo-loop suppression.

Async Cloud Pipeline *GCP Pub/Sub, Cloud Scheduler, Django*

- Queued image-to-text processing of supplier bills via Pub/Sub so billing never waits on slow work.
- Scheduled nightly report generation and expiry / slow-moving stock alerts for every store.

Printing & Reporting *Flutter, Dart*

- One polymorphic print model for sales, purchases and returns: thermal receipts and multi-page GST PDFs.
- Role-based reports (cashier vs owner) with cached pagination and streamed Excel / CSV export.

EDUCATION

B.Tech in Mechanical Engineering, MNNIT Allahabad GPA: 7.61 2024
